**13.56MHz Tx in standby mode**

N/A: Not applicable, since the emission level of the EUT was too weak to be measured. (-70dBm was the minimum level which could be detected by measuring Rx when below 1GHz)

**Remark:**

Data of measurement within this frequency range shown “ -- ” in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured. Measured in frequency range from 9k~10th harmonic or 1GHz(which is greater).

Frequency (MHz)	Spurious Emission		Limit (dBm)	Test Result
	polarization	Level(dBm)		
40.68	Vertical	-68.04	-57dBm	PASS
94.92	V	-67.45		
122.04	V	-69.32

40.68	Horizontal	-69.99		
94.92	H	-68.03		
122.04	H	-72.81		
-	H	-		

Note: The test frequency range is 30MHz to 1G, the reading of other frequencies emissions is attenuated more than 20 dB below the limits or the field strength is too small to be measured
